

Technical specifications

Keur Mame Boye

The show is performed indoors or outdoors in a protected area, without noise pollution.

- Duration: 35 minutes
- The show can be performed up to three times a day
- Capacity: maximum 130 people (*depending on the depth of the seating area, please contact us*)

Stage area

- Minimum dimensions:
 - Opening: 6m
 - Depth: 4m + min. 1m between the edge of the stage and the first row
 - Height: 2.5m

Please do not hesitate to contact us if the dimensions of your venue do not quite match these requirements. We may be able to adapt.

- Blackout required (in the room)
- Audience seating: tiered seating essential (steps or cushions on the floor, half-height benches, chairs, tables, etc.)
- Access doors with a minimum width of 1.25m. *Please contact us if there is a narrower door to access the room.*

Assembly

- Assembly : 2 hours
- Dismantling : 1 hours
- 1 person to assist with unloading and reloading

Sound

- Two floor speakers (see layout plan), sound is sent from the control room via mini-jack

Light

-Indoors: ideally 5 x 1KW or 650W PCs with 5 graduated circuits + your public lighting. However, it is possible to perform with just a small front + 1 direct circuit on stage.

Ideally, DMX control from the control room (we provide the computer + DMX interface). For smaller venues, this can be done using simple three-way switches. -Outdoors: 1 direct circuit on stage + one side if the show is performed in the evening.
